

VANSH KHANEJA

+91 7529928842 | vanshkhaneja2004@gmail.com | [Linkedin](#) | [GitHub](#) | [Portfolio](#) | Delhi, IN

AI & backend engineer experienced in designing scalable systems, developing backend services, and building AI-powered applications including conversational agents, chatbots, and fine-tuned language and image generation models.

WORK EXPERIENCE

Fotello, SDE Intern

Jul 2026 - Sep 2026

- Worked on revamping the **cancellation flow** to reduce customer churn by improving the user experience and backend workflow.
- Built and improved image processing features, including **lens correction**, and developed customer-facing **reporting dashboards** with data backfilling to provide usage insights and account statistics.

Helios Infotech, AI & Backend Developer

Jul 2025 - Jun 2026

- Developed and deployed scalable **FastAPI-based backend services** for conversational AI, voice AI, and ML applications, implementing **session management**, **authentication**, **PostgreSQL databases**, and **AWS S3 storage pipelines**.
- Built backend systems for **RAG chatbots**, **multi-agent workflows**, and **tool integrations**, deploying open-source LLMs (Llama-3, Qwen-2.5) using **vLLM**, **GPUStack**, and **Modal** with **multi-tenant request handling**.
- Developed backend services for an **algorithmic trading platform**, implementing **cron-based pipelines with Redis and Celery** to fetch regular market updates, process trading data, and manage asynchronous background jobs for trading workflows.

Empire Imports LLC, Python Developer (Contract)

May 2025 - Jul 2025

- Built a **customer-facing chatbot** for product search, FAQs, and policy summaries using **LangGraph agents and RAG**, integrating **Freshdesk via webhooks to escalate unresolved queries to the support dashboard**.
- Developed an **automated product image enhancement system** capable of detecting and correcting visual defects, resizing images, recreating cropped sections using masking and inpainting, and aligning products to improve catalog consistency.
- Created **custom MedusaJS plugins** to streamline admin-side order workflows, manage product metafields, and enable **batch-level product description generation and AI-powered product summaries**, improving catalog management efficiency.

Mersate, SDE Intern

Oct 2024 - Apr 2025

- Worked on **Meilisearch** into the backend system, implementing subscribers to sync product updates in real time, ensuring fast and consistent search indexing.
- Optimized **product page data retrieval** using Meilisearch, reducing unnecessary database calls and improving response times, implemented scheduled cron jobs for log fetching and cleanup.

Superteams.ai, AI Intern

Jun 2024 - Aug 2024

- Authored technical articles on computer vision analytics, covering topics such as **footfall counting** systems for retail environments using object detection and tracking to analyze **visitor movement** patterns.
- Wrote technical content on RAG-based AI applications for **document retrieval** and conversational querying, along with generative AI techniques such as image inpainting and **virtual staging** for interior image enhancement.

SKILLS

Languages & Frameworks:

Python, Java (DSA), C/C++, SQL, JavaScript, React, Next.js, FastAPI, Flask

AI / ML & LLM Systems:

TensorFlow, OpenCV, LangChain, LangGraph, Large Language Models, Agentic AI, MCP, Fine-Tuning, RAG, Computer Vision, Comfy UI

Databases, DevOps & Deployment:

PostgreSQL, Qdrant, Pinecone, Chroma DB, Meilisearch, Elastic Search, Redis, Git, Docker, AWS, CI/CD

EDUCATION

B. Tech in Computer Science - 8.9 CGPA Guru Gobind Singh Indraprastha University

May 2026

Machine learning, Object Oriented Programming, Database Management, Computer Vision, Data Structure & Algorithms

10+2 CBSE Board – 94.6% Goodley Public School

Jul 2022

Computer Science, Physics, Mathematics, Chemistry, English

PROJECTS

ConvoFlow : Python, FastAPI, Next.js, React Flow, Multi-LLM, Qdrant, RAG

- **Designed** a no-code platform workflow builder with visual drag-and-drop canvas (React Flow) and 15+ modular nodes for LLM calls, conditional logic, web search, and email automation
- **Created** a customizable pipeline using OpenAI embeddings + Qdrant vector database for semantic document retrieval and knowledge-augmented chatbot responses

WearWhat : Python, FastAPI, PostgreSQL, OpenAI (GPT/CLIP), YOLOv11, Google Gemini, Qdrant, MinIO, Docker

- **Built** an AI-powered digital wardrobe platform enabling users to upload clothing photos, automatically categorize garments using CLIP embeddings, and transform casual images into professional product photos
- **Developed** outfit recommendation pipeline combining GPT-4, Qdrant vector search and weather API integration, and migrated to self-hosted MinIO for scalable image management
