

VANSH KHANEJA

+91 7529928842 | vanshkhaneja2004@gmail.com | Delhi, IN | [LinkedIn](#) | [GitHub](#)

Computer Science student with a keen interest in artificial intelligence and machine learning.

Experience

Mersate , SDE Intern

Oct 2024- Apr 2025

- Deployed the company's web platform and AI services on AWS EC2, ensuring performance, scalability, and reliability
- Collaborated across teams to integrate AI features into the platform and troubleshoot cloud-based deployment challenges

Empire Imports LLC, AI Intern

Jul 2025- Sep 2025

- Built an AI-powered customer support chatbot for automated product recommendations, improving response efficiency and user experience.
- Worked on a automated product image editing solution capable of detecting and fixing visual defects, regenerating cropped areas and aligning items for product catalogue optimization.

Skills

Programming Python, Java (DSA), C/C++, SQL, Git, React, Next.js

Techniques Tensorflow, OpenCV, YOLOv8, LangGraph, MediaPipe, Scikit-learn, Flask, FastAPI, Tkinter

Deployments Docker, AWS, EC2, Azure

Education

B. Tech in Computer Science - 8.8 CGPA

Jul 2026

Guru Gobind Singh Indraprastha University

Delhi, India

(10 + 2) CBSE Board - 94.6%

Jul 2022

Goodley Public School

Delhi, India

Projects

LegalAI Bot : References based agentic AI bot specilized for Law based quesrions

- **Developed** a FastAPI-based backend to handle uploading, processing, and semantic analysis of legal documents.
- **Implemented** an end-to-end NLP pipeline: extracted text from PDFs/DOCX, generated document embeddings, and integrated a Qdrant vector database for similarity-based search
- **Leveraged** Groq API (Llama 3) for LLM-powered question answering, combining retrieved document context with generative model outputs to respond to legal queries

Nutr AI Searcher : Python, Open CV, TensorFlow, Deep Learning

- **Developed** a multimodal FastAPI application leveraging OpenAI's CLIP model to analyze food images and text for nutrient identification
- **Implemented** a semantic search pipeline: generated CLIP embeddings (image and text) and used a Qdrant vector database to retrieve matching nutritional information
- **Managed** the full ML workflow: created and ingested image/text embeddings into Qdrant and built efficient API endpoints to provide on-demand nutrition lookups
